

Instructions for Installing CARS+Internet Demo Software

1. [Click here](#) to download the demo software.
2. After downloading is complete, open the download folder, named "Setup-CARS+Internet-Americas.zip". This is a compressed folder and the icon should look like a folder with a zipper running through the middle of it. Open the folder by double-clicking on it.
3. Once the folder opens, click the link at the top left to "Extract All Files". After extracting the files, a new window will open.
4. Click on the file named "CARS+Internet-Setup.exe". Follow the installation wizard by clicking the "Next" button when prompted.
5. At the end of the installation, you will receive a message regarding updating your computers registry. NOTE: This message may be "hiding" behind another message stating that the software must be restarted. If you see the "restart" message first, look for another window behind it with the registry message. Click "OK" when prompted to update the Registry.
6. Then click "Finish". When installation is complete, your PC will be rebooted. The message says the software will be restarted, but in actuality, it will reboot your computer. If you have any unsaved work in other programs, make sure that gets saved first.
7. The installation will create a new program group named "Thermeon". Click on the "Start" button (Windows XP) or the Windows Logo (Windows Vista or Win 7). Look for a new program group named "Thermeon". Click on "Thermeon", then on the item within that group named "CARS+AbsoluteSSH".
8. Upon logging in for the first time with CARS+AbsoluteSSH, you will receive a warning message regarding the ssh key. Click on the button labeled "Accept and Save".
9. You will then be prompted for your username and password. Enter this information just as you have always done in the past. For the purpose of the demo, the information is as follows:

Username: demo
Password: easy123
